

LEAD-FREE

Members of Lead-Free NJ (LFNJ) sent a letter to Governor Murphy, Senate President Scutari, and Assembly Speaker Coughlin on March 2, 2022 asking that American Rescue Plan (ARP) funds be used to remediate lead in homes, water, and to educate residents.

Use the text below to reach out to your Legislators and ask them to support the request made by members of LFNJ.

The members of Lead-Free NJ collaborative request that the State of New Jersey allocate \$600 million from its American Rescue Plan funds to remediate lead in homes, replace lead service lines, and educate residents.

- **\$300 million** for whole home remediation, focusing on **lead-based paint**, interior plumbing, and soil remediation in low-to-moderate-income housing.

This funding will help fund the removal of lead-paint from homes and grow New Jersey's lead and healthy homes workforce, opening career pathways for residents in communities most impacted by poor housing quality.

- **\$300 million** for lead service line (LSL) replacement, with priority for low-income communities with a large number of LSLs.

This includes funds dedicated to improving drinking water quality in state-regulated child care facilities, communications, training, and remediation plans.

A portion of these funds will be dedicated to education and outreach to residents.

This request of for lead remediation was developed by members of Lead-Free NJ to ensure a healthy future for all of New Jersey's children.
